

Install PasswordZanager

Why does PasswordZanager is not on the Microsoft Store

PasswordZanager is a confidential data application manager. When an application can, or is designed to keep critical information such as accounts, passwords or financial information, Microsoft requires that the author is declared under the name of a company or is a freelancer to publish the application on the Microsoft Store.

Etienne BAUDOUX is neither of them. As PasswordZanager is a free side project that does not have the goal of attracting users, he does not want, for now, to create a company. Therefore, PasswordZanager is not available on the Microsoft Store.

Etienne BAUDOUX designed this tool for his personal needs and for fun. He doesn't provide any guarantee of quality and automatic update. PasswordZanager has been publicly published to complete his Curriculum Vitae. If you don't trust PasswordZanager or wish to use a similar tool that is regularly updated, it is recommended to use another tool like Dashlane, Keeper, LastPass, 1Password and more.

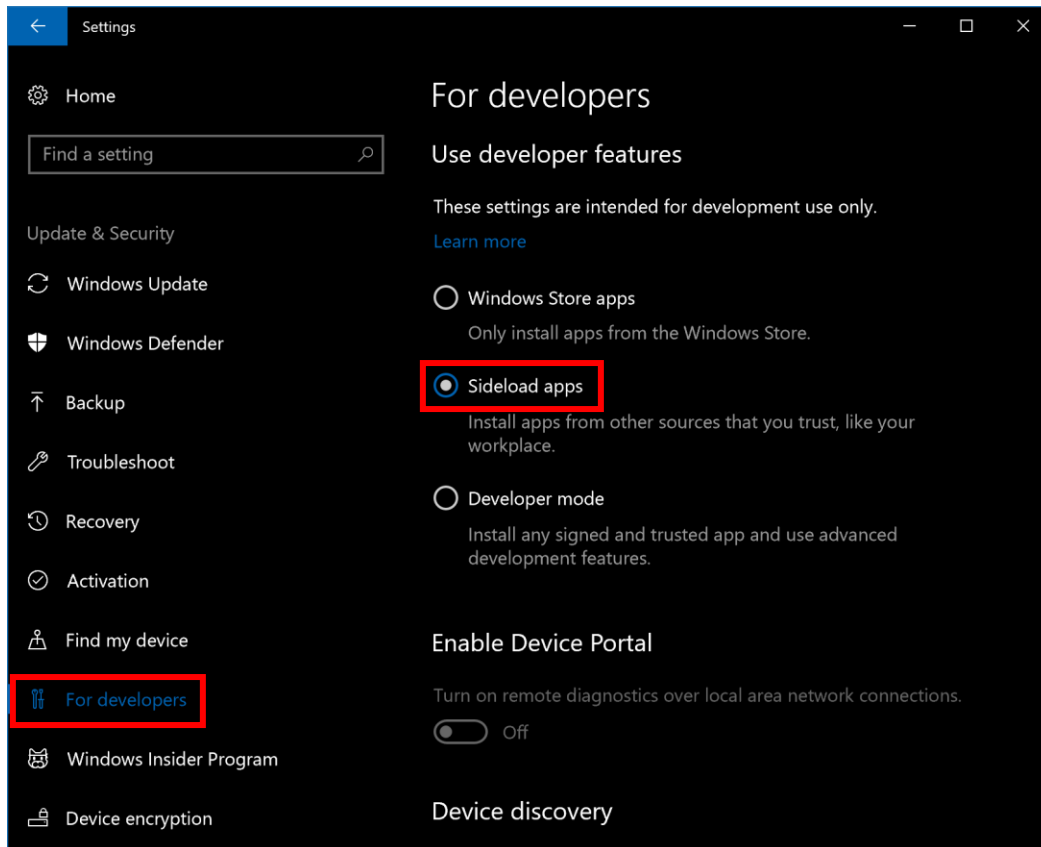

Requirement

- Windows 10 (Fall Creator Update or later)

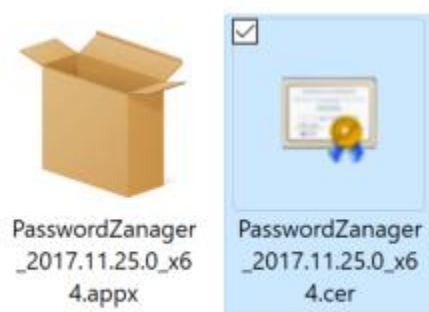

How to install PasswordZanager

1. First of all, you should allow the installation of sideload applications. To do this, go to **Settings, Update and security**, and click on **For developers** on the left side.

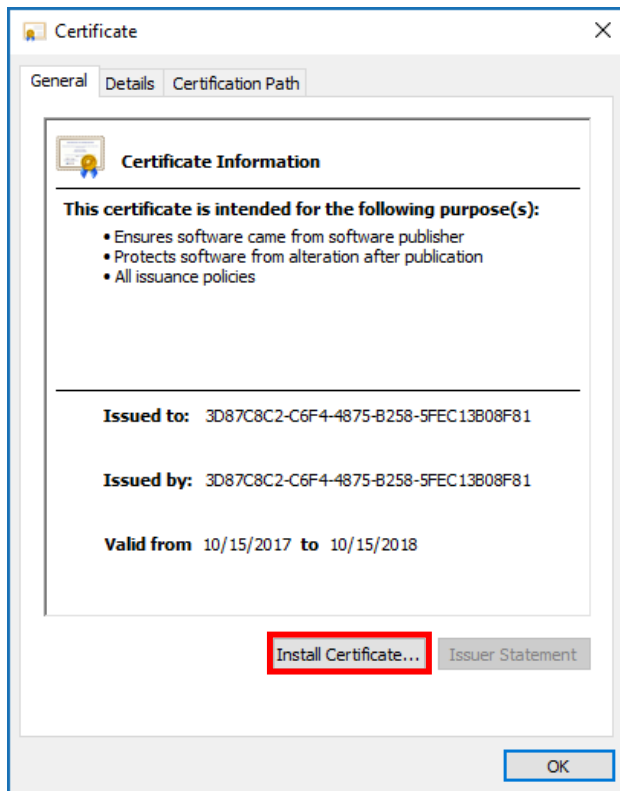

On the right side, check the box **"Sideload apps"**. A warning message will show up. Click on **Yes**.

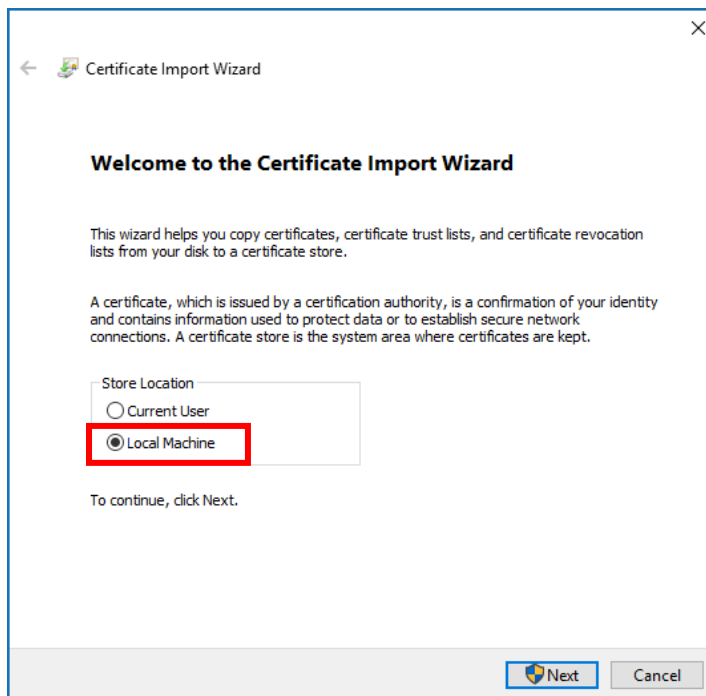

2. Open the file **"PasswordZanager_2017.11.25.0_x64.cer"**.

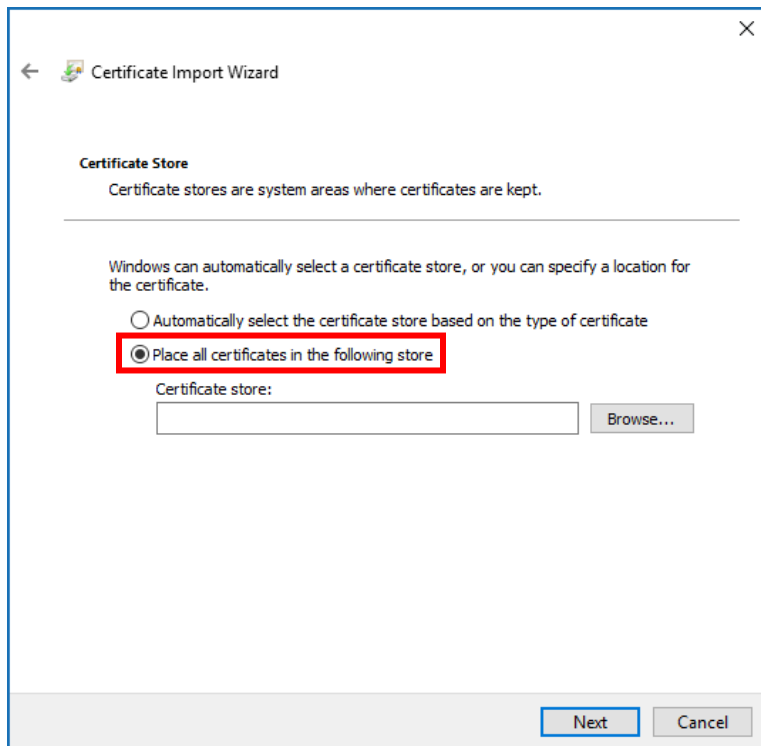

3. Click on **"Install Certificate..."**.

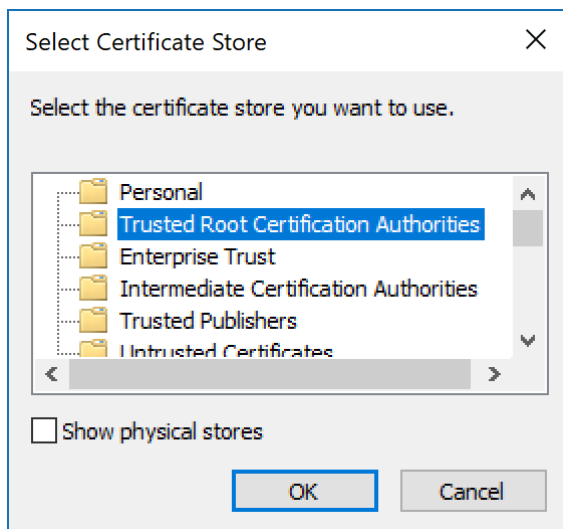

4. In the assistant, select the store location **"Local Machine"**. Click on **"Next"**.

5. Select the option **"Place all certificates in the following store"**.

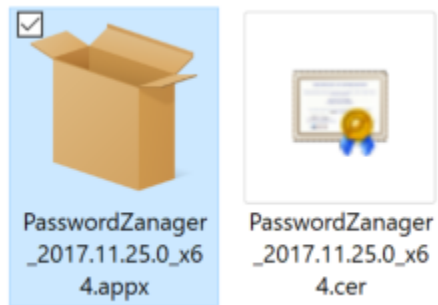

6. Click on the **"Browse"** button and select the store **"Trusted Root Certification Authorities"**.

7. Click on **"Next"** until the end of the assistant. A message indication that the installation succeeded appears.

8. Open the file "**PasswordZanager_2017.11.25.0_x64.appx**".

9. Click on "**Install**". Voilà !
